Use a suitable data structure to store a list of students with the following data:

Student ID, Name, Level, GPA, List of current registered courses.

And apply the following functions to handle the list:

1- Inset new student.
2- Delete a student using his ID.
3- Print the Data of a specific student.
4- Retrieve all students that have a GPA with a range (the range will be defined by maximum and minimum value)
5- Retrieve a list of students who registered a specific course.
